SANITARY PASS

protego®

Protego Sanitary Pass closes on itself in 1sqm and requires no ballast. Ideal for all seasons.

In these days of tension for COVID-19, in which every World State is dealing with the health emergency, Trusttechnology SA has worked to implement its flagship product Protego with a sanitizing system to quickly and everywhere create units of itinerant sanitization, a preventive tool for public and private companies: in fact, in a few moments it is possible to sanitize operators or sanitize equipment and goods before being introduced into the establishments of nursing homes's hospital centers, etc., helping to maintain a high level of hygiene.

Protego Sanitary Pass can be available in different Standard sizes (3x3 - 4x4 and 5x5) and different models with front and rear closure to contain and sanitizing any type of work's tool and vehicle.

In the hospital environment, it can be a valid tool to sterilize ambulances and any mobile health department in a few minutes.

The high pressure nebulization allows the sanitizing substance to saturate the environment and penetrate inside the passenger compartment, decontaminating every surface.

HOW DOES IT WORK

The system is equipped, inside, with nebulizing nozzles arranged precisely to obtain saturation of the environment avoiding dispersions.

The nebulization system will be connected to a control unit capable of automatically mixing the water and the sanitizing product in the percentages indicated by the manufacturer.

Access is regulated by a LED light signaling system, by a movement detector that activates the pump and the consequent leakage of the sanitizing liquid throughout its stay in the structure. Furthermore, by positioning a carpet inside the **Protego Sanitary PASS**, it is possible to sanitize all surfaces in contact with the ground.

INSTALLATION

Protego Sanitary PASS is ready for use, in fact, all systems (the sanitation system control unit, the nozzle body, the mixing water system, the movement sensor, the thermal scanner, the light signaling system and the opening and closing mechanism) are already pre-assembled and tested in the company during the production phase.

Thanks to the automatic opening that takes place in 1 minute with the help of a single operator, Protego Sanitary PASS can be used immediately, just connect the electric cable to the mains, the water system to the mains water and fill the tank of the sanitizer.

SANITARY PASS

protego®

Protego® is the intelligent self-assembly structure, the result of research by Trusttechnology SA, the Swiss company that holds its international patent. The unceasing development, the continuous research on the most performing materials, the attention to the assembly details, make Protego® a product that is beautiful to look at, easy to operate, light to live.
